Prairie Technology Introduces new SWORL One Part Bulk Spray Equipment at IBEX 2008

Fort Lauderdale, Florida, October 2008

SWORL, div. of Prairie Technology Group, Inc., introduces an easy to use, low cost (\$1995.00) spray one component pail dispensing equipment for use in spray fabrication of re-usable vacuum infusion bags. CCBM technology is the quickest way to reduce styrene emissions and to aid in VOC compliance. Spray fabrication of re-usable vacuum infusion bags is the most economical route to harness CCBM technology benefits due to the reduced labor costs and life of the bag. Now shops of all sizes can benefit from closed cavity bag molding technology. The equipment is an all air driven, easily portable, suitable for spray or extrusion dispensing of one component moisture cure silicone for use in the actual fabrication of the re-usable vacuum infusion bags.

For more information about SWORL, PRSI 108 or bulk spray equipment, contact: Larry Audette, Prairie Technology Group, Inc., 602 E. Front Street, Hutto, Texas 78634, 512-846-2444, ext. 313 or e-mail: info@prairietechgroup.com. Visit our web site at www.sworl.net.
